Adidas Sales Analysis

Sales, Product & Regional Performance Analytics

Sathish S · Anudip Foundation · DBA_AI

THE CHALLENGE

Problem, objectives and questions

Problem Retail sales data is hard to interpret across product categories, regions, customer segments, returns and promotions. This project turns it into an analysis workflow that supports data-informed decisions.

OBJECTIVES

1. Review overall sales and KPIs
2. Compare product types
3. Explore regional patterns
4. Understand customer segments
5. Examine returns and promotions
6. Share findings in a navigable report

BUSINESS QUESTIONS

- Which products perform best?
- How does performance vary by region?
- Which customer segments drive sales?
- What patterns appear in returns and promotions?

DATASET & TOOLS

12,650 orders, 25 columns

12,650
rows

25
columns

CSV
file format

adidas
table in new_project

DATA FLOW

Adidas (Raw) CSV

Adidas (Cleaned) CSV

TOOLS

- MySQL / SQL
- Power BI Desktop
- Power Query
- DAX
- CSV

PROJECT WORKFLOW

From industry choice to insights

1. Industry Selection
2. Problem Identification
3. Dataset Collection
4. MySQL Database Setup
5. Data Cleaning & Transformation
6. SQL Data Analysis
7. Power BI Data Modeling
8. Dashboard Development
9. Insights & Recommendations

SQL ANALYSIS

Eight steps from raw table to insight

1

Database setup

new_project DB, adidas table, Order_ID primary key

2

Quality checks

Duplicate IDs, missing values, date range

3

Overall sales

Orders, units, revenue, cost, profit, rating

4

Product analysis

Revenue, units and profit ranked by category

5

Regional analysis

Sales and profit by zone and country

6

Payment methods

Orders and sales per payment method

7

Monthly trends

Revenue and profit by year and month

8

Dataset summary

Rows, distinct customers, categories, countries

Techniques: CREATE TABLE · SELECT · COUNT · DISTINCT · SUM · AVG · MIN · MAX · GROUP BY · HAVING · ORDER BY · YEAR · MONTH

POWER QUERY & DAX

14 measures behind every KPI

- Total Sales Revenue
- Total Profit
- Total Units Sold
- Total Orders
- Total Cost
- Profit Margin %
- Average Selling Price
- Revenue per Customer
- Total Customers
- Average Customer Rating
- Total Return Units
- Total Return Amount
- Return Rate %
- Promo Code Orders

EXAMPLE MEASURES

```
Total Sales Revenue =
  SUM('Project'[Sales_Revenue])

Profit Margin % =
  DIVIDE([Total Profit],
    [Total Sales Revenue], 0)

Total Orders =
  DISTINCTCOUNT('Project'[Order_ID])

Revenue per Customer =
  DIVIDE([Total Sales Revenue],
    [Total Customers], 0)
```

POWER BI DASHBOARD

Sales and product pages

PAGE 1

Sales Overview

High-level summary of sales and profitability

- Total Sales Revenue
- Total Orders
- Total Units Sold
- Total Cost
- Total Profit
- Profit Margin %

Visuals: KPI cards, monthly trend, sales by category and region

PAGE 2

Product Performance

Compares categories and types to spot sales and profit patterns

- Revenue by product type
- Units by product type
- Profit by category
- Category share of sales

Visuals: Bar and column charts, product comparison tables

POWER BI DASHBOARD

Regional and customer pages

PAGE 3

Regional Analysis

Geographic comparison across zones, countries and cities

- Revenue by zone
- Revenue by country
- Profit by region
- Units by area

Visuals: Map, bar chart, regional comparison charts

PAGE 4

Customer Insights

Customer traits and purchasing patterns

- Gender
- Age category
- Membership level
- Customer rating
- Customer count
- Sales by segment

Visuals: Donut and bar charts, KPI cards, segment comparisons

POWER BI DASHBOARD

Returns, promotions and coverage

PAGE 5

Returns & Promotions

Return monitoring and discount-related analysis

- Return units
- Return amount
- Return reason
- Discount percentage
- Promo code
- Membership level
- Promo code orders

Visuals: Return KPIs, reason charts, promo-code comparisons, return trend

WHAT THE ANALYSIS COVERS

Sales
Revenue, profit, units, orders, trend

Product
Categories, types, colors, margin

Regional
Countries and zones with a map

Customer
Counts, ratings, gender, age, tier

Returns
Units, amounts and reasons

Promotions
Promo revenue, discount vs profit

KEY INSIGHTS

Five areas to validate and document

Conclusions are recorded only after verifying SQL outputs or the Power BI dashboard.

Sales performance	Highest and lowest revenue periods vs profit and orders
Product performance	Best and worst categories by revenue, profit, units
Regional performance	Stronger and weaker countries and zones
Customer segments	Differences in distribution, revenue, ratings, tiers
Returns & promotions	Top return reasons, costly categories, discount vs profit

REPOSITORY

Project folder structure
